

I-WOB2 SPRINKLER

The I-Wob2 sprinkler is designed for center pivot irrigation. The off-center rotary-action technology provides an extremely uniform effect at low pressure.

The I-Wob2 sprinklers distribute droplets with lower application intensity over a large area of coverage at low pressure operation saves energy and money.

Features and Benefits

The protective shroud doubles as a nozzle carrier, it's capable of better withstanding harsh operating conditions. The I-Wob2 sprinkler is recognized across the globe for its ability to spread water in a highly uniform pattern resistant to wind-drift and evaporation. The below-nozzle weight eliminates the need for heavier, conventional drop weights.

Product Number	Description
RTSP-SE-IWOB2	Black Deflectors, Standard Angle, 9-Groove
@ 6PSI	#12-#26 / F. 570-2635 L/hr / D. 11.0-12.8 meters
@ 10-15PSI	#6-#26 / F. 182-4168 L/hr / D. 10.4-17.4 meters

- 100% tested, to ensure quality and performance;
- Ultra-low operating pressure of 6 to 15 psi;
- 3/4" M NPT can fit most regulators in the market;
- Special design can prevent the stuck effectively;
- 3-years' warranty on materials, workmanship, and performance;
- CE certificated.

WHY I-WOB2 SPRINKLER?

Instantaneous Area of Coverage

In the example below, the I-Wob2 is instantaneously spreading the same amount of water over an area five times greater than the area covered by the stream driven spray sprinklers.

I-Wob2

Other Stream Driven

Low Application Intensity

Stream-driven sprinklers' distinct streams instantaneously place the entire flow in a relatively small area. This more intense application can negatively impact the soil surface. In contrast, the I-Wob2 applies water to a larger area of soil surface, reducing the impact of the sprinkler's pattern on the soil structure. Larger instantaneous coverage offers a slower intake to reduce runoff and wheel track.

Unmatched Uniformity

The I-Wob2 offers a gentle, more uniform delivery and an even droplet size. Consistently-sized droplets help maintain a sprinkler's pattern integrity in wind conditions and are more resistant to evaporation. The I-Wob2's droplet size can be tailored to the needs of the soil through the selection of proper deflectors and operating pressures.
